

Types of Bone - match the type with one example below:

Type

- Long
- Short
- Irregular
- Sesamoid
- Flat

Example

- Patella
- Vertebrae
- Femur
- Carpals
- Scapula

'There is no lift to success; you have to take the stairs.'

Identify 10 bones in the human skeleton	Describe four functions of the skeleton	Describe the structure of a long bone
Describe all eight locations of bones in the skeleton	What are cancellous bones?	Identify the articulating bones in the elbow joint
Identify and describe all parts of the vertebral column	Describe three structural features of a synovial joint	Identify and describe the axial and appendicular skeletons
If you have a C1 injury, what have you injured?	Add up all parts of the vertebral column - what is the correct total?	What is the role of flat bones in the skeleton? Give a practical example
1 point	2 points	3 points

For the questions above, answer enough correctly to reach 10 points.

'There is no lift to success; you have to take the stairs.'
